E.ON Drive
ElectricFleet
The complete solution for your electric fleet

In cooperation with

e-on
Drive
The vehicle fleet of tomorrow is more efficient, sustainable and, more importantly, electric.

Let’s make it happen together.

Electromobility is picking up speed, with manufacturers launching lots of e-models and the state promoting development with significant tax benefits. It’s high time to jump on the bandwagon.

which is why E.ON Drive is now offering its ElectricFleet service, making it easier than ever for companies to exploit all the benefits of an electric vehicle fleet.

In cooperation with Car Professional Management, the market leader for fleet management in Germany and part of the Société Générale Group, we provide you with a complete package - from leasing contract to charging station, from data management to green power. Exploit the potential of e-mobility for your company, your image and your employees.

Together we can advance e-mobility in Europe.
Do electric fleets require a lot of work? Not any more, as the E.ON Drive ElectricFleet provides everything your company needs to make the switch. We install the charging columns in your company car park, provide your employees with ChargeCards for charging on the go, and install wall boxes at private parking spaces at home. You always have an overview of where and for how long vehicles are charging and how high the actual energy consumption is. Your employees enjoy the convenience of care-free electric driving, as you benefit from simple implementation provided by a single company.

Your employees choose their preferred electric car from our cooperation partner Car Professional Management, Germany’s market leader for fleet management and part of the Société Générale Group.

We’ll provide your company with a tailored, future-proof charging infrastructure that’s modular in its design for subsequent expansion. We take responsibility for planning, installation in the company’s car park, and transparent data analysis. Completely tailored to your needs.

Your employees can charge on the go with the E.ON Drive app and ChargeCard at more than 5,800 charging points, which form a dense supply network throughout Germany.

At home, your employees charge using the E.ON Drive SmartBox, which we, of course, are happy to install.
Finally practical: e-mobility for company cars

An electric fleet offers a whole host of benefits for companies, including reduced CO₂ emissions, which are further decreased in combination with renewable energy and which will help you reach your sustainability goals sooner. Lower levels of noise and pollution are also significant advantages.

Electric vehicles in the fleet also make economic sense, as they decrease operating and maintenance costs over the long term. You can also rely on stable energy prices and enjoy freedom from volatile petrol prices.

The fast-growing selection of electric vehicles and the 0.5% tax as a perk also make electric vehicles attractive for your employees. That’s something you should be prepared for.

Good arguments for adding electric vehicles to your fleet

- Reach CO₂ and sustainability goals
- Electric vehicles reduce operating and petrol costs by up to 50%
- Employee demand is growing
- 0.5% tax for electric company cars
- Extensive funding by the Federal and State Governments
Employees, fleet managers and the environment – everyone benefits

E.ON Drive ElectricFleet is developed in collaboration with Car Professional Management and is tailor-made to meet the needs of fleet customers.

Fleet managers

As you increase the percentage of electric vehicles, you boost sustainability and reduce consumption and maintenance costs for your company. We’ll be happy to provide you with a custom quote.

Employees

Help your employees switch to e-mobility and allow them to enjoy the 0.5% tax on company cars, which went into effect in 2019.

Decision makers

An electric fleet will make your company more innovative and allow you to develop a sustainable image, which is attractive to younger talents. Our complete solution means less work for you and reduces costs over the long term.

Facility managers

Tailored to your location and requirements, we develop a modular, future-proof infrastructure solution for you.
Your employees drive electric vehicles – E.ON Drive organises implementation

1. Simple set-up
   Your individual consultation is the first step. Together we configure the electric fleet and charging infrastructure that works for you – with a modular design and transparency. New vehicles and users can be conveniently added at any time.

2. Charging at work
   With E.ON Drive’s custom charging solutions, your employees, guests and customers can conveniently charge in the company car park. Preferably with certified renewable energy.

3. Charging on the go
   The charging card and app allow you to charge on the go at over 5,800 charging stations, with invoicing also occurring on the E.ON Drive platform.

4. Charging at home
   The home charging station sources home energy or certified E.ON renewable energy with transparent documentation. The employee can thus charge privately, whilst the company maintains an overview of costs and can refund them.

5. Integration into the company
   With E.ON Drive ElectricFleet, you always have control over charging sessions and invoice data. E.ON offers other energy solutions which can be integrated with ease.

Full invoice and data transparency

E.ON Drive platform
Two cards, one aim: unlimited mobility

The E.ON Drive app will help you locate charging stations near you. And with the E.ON Drive ChargeCard, you can charge and pay at more than 5,800 points throughout Germany, with a high level of transparency. Billing is conveniently carried out as part of your monthly statement via Car Professional Management. Your usage data is integrated into the total cost display so that you still keep a full overview.
The Fast charging station

- From 30 to 80% battery capacity in 15 minutes
- One DC 50 kW, one AC 22 kW
- Alternating and direct current
- Compatible with all vehicles featuring Type 2, CHAdeMO and CCS connectors
- With a design of your choice

The Pro charging station

The tried-and-tested Pro charging station features two AC connectors and an individually designable surface, making it an eye-catcher in any car park. The online connection to the E.ON Drive back end enables permanent monitoring, RFID and app-based user identification, and the presentation, evaluation and export of all charging sessions.

- Two charging points: two vehicles can be charged at the same time
- Available with two 22 kW or one 22 kW and one 11 kW
- Compatible with all vehicles with Type 2 connector
- Charges up to 9.5 times faster than a household power socket
- 1 hour of charging for a range of up to 150 km

The relaxed way to drive – and charge

This charging station is called Fast because it is fast, thanks to 50 kW direct current, which can charge a BMW i3 to 80% in just over 30 minutes. The Fast charging station is ideal for highly frequented car parks.
Dynamic duo: electric vehicle and SmartBox

Both at work

Charging capacity from 3.7 to 22 kW

... and at home

Compact housing

With charging cable or colour

Wall-mounted or free-standing on column

Capable of load management
And that’s just the beginning

E.ON Drive is your partner for the world of energy and mobility of the 21st century. With our modular solutions, we already support BMW, Nissan and the city of Copenhagen and, with our expertise, can do the same for you. We can also ensure full implementation of an electric fleet at your company, including intelligent load management and, on request, 100% certified renewable energy for all charging sessions. So you’re well prepared for the future.

100% clean energy throughout Europe

By 2020, we’ll have installed 250 ultra-fast charging (UFC) stations throughout Europe, which offer an output of 150 kW and can charge an electric vehicle in minutes.

- Join the Europe-wide E.ON Drive network
- Modern energy generation and storage solutions
- Intelligent energy and load management
- 100% renewable energy
